21st SPACE WING
ENVIRONMENTAL COMMITMENT STATEMENT

The 21st Space Wing operates and sustains global missile warning and space control capabilities and installations for America and its allies. Protecting the environment where we live and work is an integral part of supporting our vision of being "The Space Superiority Wing of the 21st Century - Driving Excellence Today and Tomorrow".

Environmental quality remains one of our highest priorities and will be a major factor in disciplined decision-making processes. We dedicate ourselves to environmental leadership by demonstrating innovative improvement of our processes to prevent and reduce waste generation. In all of our activities we will seek to:

- Achieve continual improvement in environmental performance over and above regulatory and legislative requirements;
- Prevent environmental pollution and waste;
- Build environmental concerns and sustainment into relevant guidance, programs, and missions;
- Promote the conservation and sustainable use of natural and manmade materials;
- Integrate environmental compliance into all levels of management;
- Communicate environmental commitment to all installation personnel and to all other interested parties; and
- Work in partnership with all stakeholders to promote waste reduction.
